

Fun with Words

A satellite is an object that orbits another object in space. (The moon is a satellite of the Earth.) An artificial satellite is an object that people have put into space. Some of them help people in their everyday lives. For example, TV satellites send signals to televisions so that people can watch their favorite shows. There are also millions of pieces of space junk in orbit, like parts from old rockets.

SATELLITE

How many different words can you make from the letters that spell “satellite”? Write them on the blanks.
