Regional books are profitable

Statistically speaking, regional books have extremely low return rates and high customer satisfaction. To put it simply, AdventureKEEN creates products that customers want. So you get to spend more time selling and less time worrying about slow-moving items on your shelves. Regional books succeed by providing specific information to each market about its own area. We publish books about the birds, parks, trees, and hikes in your town. Those are grassroots winners!

Regional books are often quiet best-sellers. These titles routinely yield four, five, or six turns per year. That favorably stands up to or exceeds every other category. It's nice to have easy, obvious, low-maintenance books that sell and sell and sell by themselves.

Regional books give independent stores a way to highlight the fact that, yes, you are local. The presence of regional titles tells customers that you're plugged in to what they care about in your community. Every connection you make is another potential customer. Regional books provide opportunities to make such connections by providing a sense of place and by celebrating the local environment. When passersby see your regional titles on display, they stop and browse—the first step toward becoming your loyal customers.

Convenient browsing

With AdventureKEEN's new catalog, browsing is easier than ever! Start by checking the WHAT'S NEW section. Then page through the NATIONAL selection. From there, jump to your REGION (such as Midwest). Finally, look at the titles for your STATE. For a downloadable digital version of this catalog, visit advkeen.co/catalog.

About AdventureKEEN

AdventureKEEN is an independent publisher of nature and outdoor-activity books. Our company's founding dates back more than 40 years, guided then and now by our love of being in the woods and on the water, by our passion for reading, and by the senses of wonder and discovery that come from spending time outdoors in beautiful places.

It is our mission to share that wonder and the many opportunities for fun with our readers, especially with those who haven't yet experienced all the physical and mental-health benefits that nature and outdoor activity can bring.

In addition, we strive to teach others about recreating responsibly, so the natural resources and habitats that we cherish and rely upon will be available for future generations to enjoy.

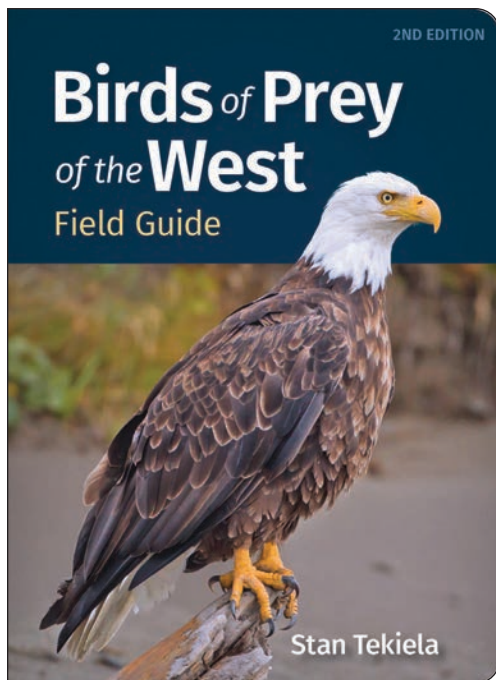

We are a small team, deeply rooted in the places we live and work. We have been shaped by our communities—primarily Birmingham, Alabama; Cambridge, Minnesota; and Cincinnati, Ohio. Drawing upon our staff's decades of experience and our awareness of the industry, the marketplace, and the world at large, we have shaped a unique vision and mission for a company that serves our readers, our authors, and the environment.

We hope to meet you out on the trail some day. Until then, if you wish to contact us, please reach out any time.

Common Backyard Weeds of the Pacific Northwest

Identify 106 Weeds and Know What to Pull or Protect

DANIEL MURPHY

Whether you're a forager, gardener, homeowner, or are simply fascinated by nature, you probably have an opinion about weeds. But do you know which to pull, which to preserve, and which to put to good use? Learn to identify common backyard weeds in your area. *Common Backyard Weeds of the Pacific Northwest* utilizes an innovative, user-friendly format that can help you identify weeds by their visual characteristics. With hundreds of full-color photographs and easy-to-understand text, it's a great visual guide to learning about backyard weeds.

CREeping AND LOW-GROWING WEEDS

Plantain

Plantago

OVERVIEW: Plantains are one of the most widely distributed and recognizable weeds. They have a perennial, sometimes annual life cycle. They form a rosette of leaves that hug the ground. Leaves are slender, leafless flower stalks arise from a woody crown and shallow roots that are fibrous and scapular.

WHERE YOU'LL FIND IT: They occur in full sun to partial shade and tolerate a variety of soil types, including compacted and clay soils. Plantains thrive in moist sites but also tolerate some drought. Find them along pathways, sidewalks, roadsides, and in lawns, gardens, and vacant lots.

LEAVES: Broadleaf plantain (*P. major*) has wide elliptical or egg-shaped leaves with parallel veins. Its margins are wavy and sometimes irregularly toothed. The deep-green, leafless leaves have thick stalks with a coarse, coarse-herring along their entire length. They vary in size from about 2 inches long to nearly 1 foot. Narrowleaf plantain (*P. lanceolata*) has lance-shaped leaves with parallel veins. Leaves lack prominent stalks and are dark green with entire margins, measuring up to 1 foot long (30 cm) much shorter.

FLOWERS/FRUIT: Slender, leafless stalks rise above leafy rosettes. **Cylindrical flower spikes** form at the top of each stalk and are composed of numerous tiny flowers. The spikes vary in length, up to 10 (or more) inches long. Flowers are greenish white or brownish green, with white to yellow stamens that protrude from the flowers. Flowers are wind-pollinated. Numerous tiny seeds are formed as the flower stalk matures. Seeds have a mucilaginous coating that is sticky when wet, which aids in dispersal.

SEASON: Flowering occurs from spring through autumn.

OTHER NAMES: Runy manna.

COMMENTS: The two common broadleaf plantain (*P. major*) looks very similar to broadleaf plantain. The leaf stalks of broadleaf plantain can be red to purple and the leaves are often a duller green than those of broadleaf plantain. Also, the common broadleaf plantain (*P. major*) has numerous leaves that are deeply toothed or lobed.

GETTING RID OF IT!
Plantains easily spread across blades due to their low profile, which helps them become established in lawns. Removing them requires pulling or digging. Do this when the soil is moist, as the fibrous roots can hold tight to the soil and make them difficult to extract. Small plants can be easily pulled, while larger plants will require digging.

WHAT'S IT GOOD FOR?
Plantains have numerous ethnomedicinal applications and a long history of being used medicinally. The leaves are edible and said to be highly nutritious. A poultice can be made with the leaves to treat bites, rashes, burns, and other skin irritations.

DWIGHT BROADLEAF WEEDS

Stinking Mayweed

Chamaemelum

OVERVIEW: An annual weed from Europe that is widespread across North America and commonly found across the Pacific Northwest, it has a short, thick taproot and branching stems that reach up to 2 feet tall before much flowering. Its stems and leaves can be hairy to slightly sticky and can have a reddish green or yellow-green hue. The plants put off a disagreeable odor.

WHERE YOU'LL FIND IT: It is adaptable to a variety of conditions but is often found in open sites with rich, moist, disturbed soils. Find it in parking lots, nurseries, parks, commercial landscaping, and vacant lots, as well as along roadsides, railroad tracks, and pathways.

LEAVES: Its leaves appear to be primarily compound, divided 3 or more times into narrow segments. They lack stalks and are alternately arranged. They are longer than they are wide and have a strong scent.

FLOWERS/FRUIT: Numerous small flower heads, less than an inch wide, are borne singly at the terminal ends of stems and in the axils of leaves. Each flower head is composed of 30 to 20 white ray flowers and a tight cluster of dozens of yellow disc flowers. They look very similar to daisies. Many tiny, oblong light-brown seeds are produced by each flower. A large plant can bear nearly a million seeds.

SEASON: Flowering occurs from late spring to early fall.

OTHER NAMES: Stinking chamomile, dog balm, stinking daisy.

COMMENTS: The strong odor of stinking mayweed will help distinguish it from other similar-looking plants. Corn chamomile (*C. officinale*) is related but much less common weed. It lacks the off-putting fragrance. Pringle-weed (*Matricaria discolor*) is a nearby, native plant commonly found in similar areas. It is a biennial plant with ferny dissected leaves that give off a pleasant or chamomile scent. Its flowers lack the white ray flowers of stinking mayweed. Chamomile (*Chamaemelum nobile*) is a perennial herb that is commonly grown in gardens and has a similar appearance but a much more pleasant smell.

GETTING RID OF IT!
Stinking mayweed is easily pulled by hand. Its foliage can cause contact dermatitis, so use gloves when handling it. Hoeing, digging, tilling, and mowing are also options. The important thing is to prevent plants from going to seed. Thick layers of mulch will help discourage new weeds from germinating. Monitor regularly.

WHAT'S IT GOOD FOR?
This plant has been used medicinally, but its toxicity, obnoxious smell, and weedy nature are good reasons not to keep it around, especially since there are similar plants that can easily take its place.

Horatio is a proud blue jay who loves to show off, but his aerial acrobatics make him hungry. When he spots a group of animals eating from a field of sunflowers, he decides to join them. The generous flowers happily offer Horatio some of their seeds, so Horatio eats and eats. He doesn't stop until just one sunflower seed remains. What will Horatio find when he returns to the field next year? How will he make amends for the harm he has caused?

This picture book is entertaining and educational, and it's sure to spark plenty of worthwhile conversations.

Dr. Karra to the Rescue

Healing Injured Animals with a Wildlife Veterinarian

CHRISTY GOVE

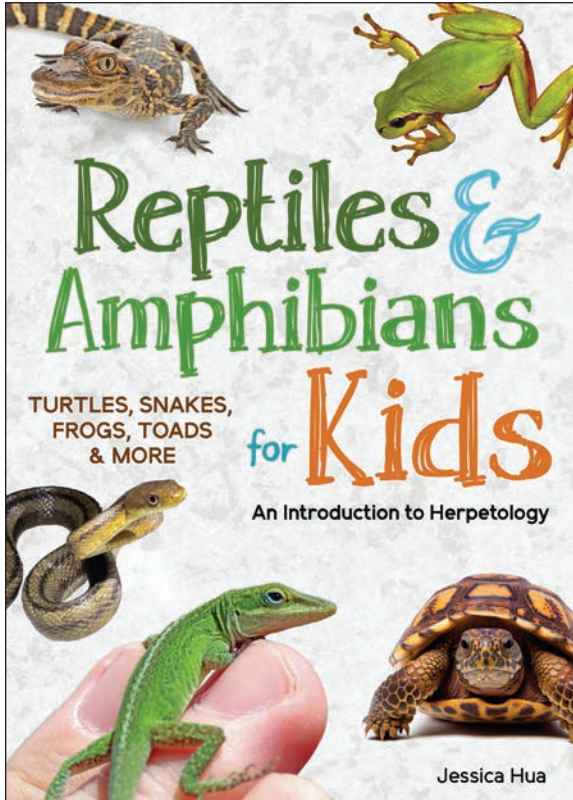

Meet Dr. Karra, a wildlife veterinarian from the Wildlife Center of Virginia (WCV), and follow her through an action-packed day. Written by acclaimed author Christy Gove, *Dr. Karra to the Rescue* is a children's book that reads like a medical drama—except all the patients are wild animals. Join Dr. Karra and her team as they treat five different critters. Every account is based on a true story of an actual patient at the animal hospital. In fact, most of the photographs in this book were provided by the WCV. If your child loves animals, dreams of becoming a veterinarian, or enjoys real-life stories, this picture book is both entertaining and educational.

CHRISTY GOVE

Christy is the author of six books, including five books for children. Her first book, *Esther the Eaglet*, was inspired by an eagle rescue that took place at her parents' cabin. From that experience, she learned about the unique and important work done by wildlife rehabilitation hospitals. The experience inspired her to research and write about more animal rescue stories. Christy lives just outside Minnesota's Twin Cities.

Reptiles & Amphibians for Kids

An Introduction to Herpetology

JESSICA HUA

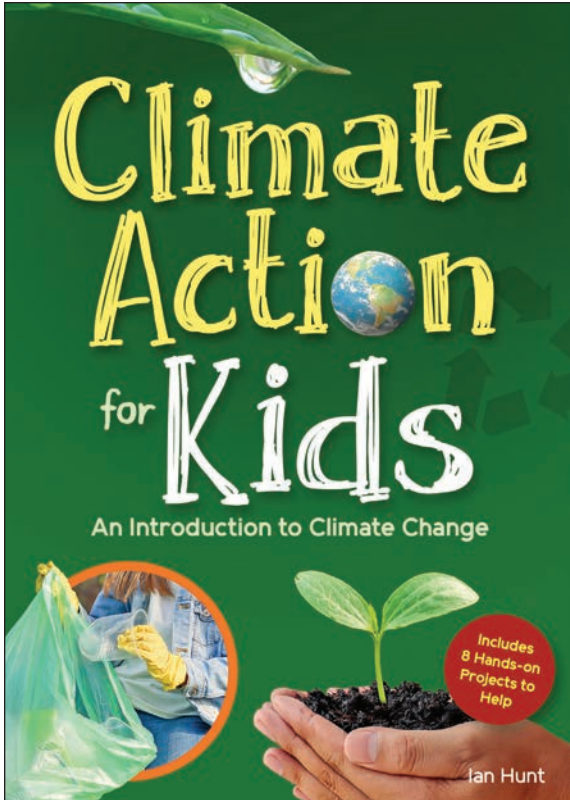

Reptiles and amphibians are some of the most exciting animals for children to discover. These small but mighty creatures spark curiosity and inspire outdoor learning. Become a young herpetologist. Learn all about frogs, lizards, snakes, turtles, and other cool critters. Jessica Hua, a professional educator and researcher, presents a kids' introduction to herpetology, the study of reptiles and amphibians. From alligators and crocodiles to skinks and salamanders, this easy-to-understand book is a perfect guide for beginners.

Reptiles & Amphibians for Kids features expert insights on a variety of common and important species. It delves into such topics as the differences between reptiles and amphibians, their evolutionary beginnings, and staying safe when encountering them. JESSICA HUA

Jessica is an associate professor at the University of Wisconsin–Madison in the Department of Forest and Wildlife Ecology. There, she leads a group of scientists working to understand the threats that amphibians face. WHIRLPOOL GALAXY (MESSIER 51)

BEAUTY: ★★★

DRAGGING EYES: A beautiful sight

NOW EASY IS IT TO SEE? Telescope required

BEST TIME TO SEE IT: Spring (in Carles Venafici)

TIPS: Galaxy discovered 1773 by Charles Messier

NOTES

Imagine a TV series like *Downton Abbey* featuring not the fictional Earl of Grantham, but the real Earl of Rosse, William Parsons. Lord Rosse was an amateur astronomer who had the means to build successively larger and larger telescopes. His ultimate creation was the Leviathan of Parsonstown, a 60-foot-long, 6-foot-diameter reflecting telescope housed in a 3-story castle. It was the largest telescope in the world for more than 70 years. Such a TV series would follow Lord Rosse in his attempt to uncover the true nature of nebulae. Were they gigantic gas clouds in the process of forming new star systems? Or were they—as Lord Rosse believed—vast stellar clusters, so far away that individual stars could not be seen? Would Lord Rosse be able to prove his theories to the skeptical

astronomical community? Or would his quaint ideas ostracize him from his scientific peers? With his Leviathan, Rosse stared at Messier 51, a nebula near the Big Dipper, and discovered its spiral form: his drawing of the “Whirlpool” closely matches modern astrophotographs. But his painstaking studies were not able to resolve the fundamental question. Many years later, using instruments unknown to the nineteenth-century astronomer, Rosse discovered that Lord Rosse was both right and wrong: some nebulae, like the Orion Nebula, are luminous gas clouds in the process of forming new stars. But others, including the spiral Messier 51, are indeed unimaginably distant clusters of stars. These “island universes” were far more numerous than Lord Rosse ever imagined, and their study ultimately revealed how the universe came to be.

OBSERVING TIPS

At the Handle of the Dipper. Start your search for M51 at Eta Ursae Majoris, the star on the end of the Big Dipper’s handle. Move about 3 degrees in a line toward Beta Canum Venatorum (see chart) and you should run into it.

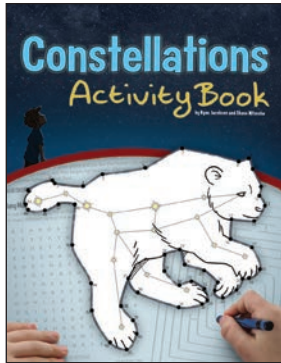

Double Core. With a small telescope pointed at M51, you might notice two distinct fuzzy objects. The larger object is the core of M51, while the smaller one is a companion galaxy, known as NGC 5195. The latter is orbiting around M51 and was probably once a spiral galaxy too, but its closer encounter with the larger M51 has disrupted it.

Clear Skies and Lots of Aperture. Don’t expect to see spiral arms unless you have a large telescope (12” and greater) and very clear skies. A star party or a local college observatory is your best bet to see this faint galaxy in all its glory.

Learn with coloring & activity books

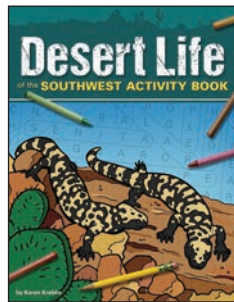

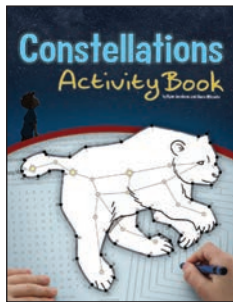

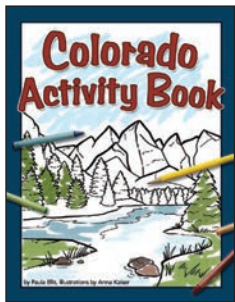

Coloring can help children improve their concentration and creativity, and it can help build fine motor skills while increasing hand strength. The Color and Learn activity books make learning fun for children. Each activity book focuses on a specific region or a specific topic pertaining to the outdoors and nature. Within each 64-page book, a short paragraph of educational text appears on almost every page, paired with a black and white illustration to color, a maze, a word find, a dot-to-dot, or another interactive activity. Priced well below \$10, the Color and Learn activity books promise hours of child engagement.
